

V61

Latest Firmware Version: 1.0.0.9

Release Date: November 23rd, 2015

Firmware Update Instructions: Windows

1. Connect your V61 keyboard to your computer via USB cable. To ensure the firmware update is sent properly, we recommend disconnecting all other USB devices, hubs, or adapters from the computer during the update.
2. Once your computer has recognized your V61 is connected, open the firmware updater installer application: **AlesisV61FirmwareUpdaterPC_1.0.0.exe**.
3. Follow the installer's on-screen instructions to complete the installation. This will install the firmware update application to the following location on your PC:

C:\Program Files (x86)\Alesis

4. Open the **Alesis V61 Firmware Updater** application.
5. Follow the updater's on-screen instructions to complete the update.
6. When completed, the updater will display **Your V61 has been successfully updated. You may now close this application.** Click the **Exit** button.

That's it! Your V61 now has the latest firmware.

Firmware Update Instructions: Mac OS X

1. Connect your V61 keyboard to your computer via USB cable. To ensure the firmware update is sent properly, we recommend disconnecting all other USB devices, hubs, or adapters from the computer during the update.
2. Once your computer has recognized your V61 is connected, open the firmware updater installer application: **Alesis V61 Firmware Updater**.
3. Follow the updater's on-screen instructions to complete the update.
4. When completed, the updater will display **Your V61 has been successfully updated. You may now close this application.** Click the **Exit** button.

That's it! Your V61 now has the latest firmware.

Changes in v1.0.0.9

- Improved keybed response and playability.
- Other minor bug fixes.
